

"Pushing" Timez Attack to Multiple Computers

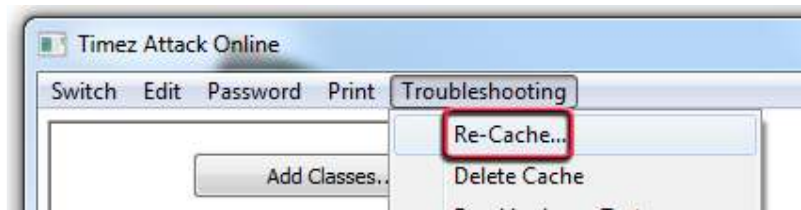

1. On a host machine, go to www.bigbrainz.com/Schools.php to download and run the Timez Attack installer for Mac or Windows:

2. After installation, let it launch Timez Attack and choose a "School" button :

3. Select your school and enter or set your password.
4. From the menu, select Troubleshooting/Re-Cache.

5. Push the .exe or .app and the cache folder(s) to remote stations:

WINDOWS	OS X
A diagram showing the Windows file structure. It includes 'Program Files (x86)' (with a red box around it and a red arrow pointing to the text '(Vista/Windows 7)'), 'TimezAttackLauncher', 'TimezAttackLauncher.exe' (with a red box around it), 'ProgramData', and 'BigBrainz' (with a red box around it). A red note at the bottom says 'In XP, the cache is C:\BigBrainz instead.'	A diagram showing the OS X file structure. It includes the 'TimezAttackLauncher.app' (with a red box around it and a red arrow pointing to the text '(Typically on desktop or in Applications)'), followed by a plus sign, then '/Library/Application Support/Big Brainz', followed by a plus sign, and finally '/Library/Application Support/TimezAttack'.

6. Ensure all users have read/write permissions to the cache and all of its contents on the target computers.
7. Create shortcuts. Note that the .exe or .app is small enough to be used in place of a short-cut or alias if desired.
